

ABSTRACT

ELECTRONIC TIMEPIECE INCLUDING A TIME
RELATED DATA ITEM BASED ON A DECIMAL SYSTEM

The present invention relates to an electronic timepiece allowing the display of at least one first time related data item (H_1) conventionally based on the Hour-Minute-Second system, and at least one second time related data item (H_2) based on a decimal system in which the time is divided at least into thousandths of a day. For this purpose the timepiece according to the present invention includes generating means (14) which, from auxiliary control pulses (I_1) originating from the time base (2), allow second control pulses (I_2) to be supplied allowing said second time related data item (H_2) to be formed and displayed.
